03 — Public Verification

Public-facing verification portal for checking a complaint ID and its resolution receipt.

04 — System Architecture

Proposed technical architecture covering frontend, backend, verification, Web3, and storage.

● SYSTEM DESIGN

Proposed architecture

This demo simulates the Verification layer client-side with SHA-256; a production build anchors the fingerprint on-chain.

Frontend
Web app · citizen portal · officer dashboard · public verification

Backend
Complaint API · authentication · notifications · SLA engine

Verification
Hashing · evidence checks · AI anomaly detection · dispute workflow

Web3 layer
Blockchain transactions · immutable event hashes · smart-contract rules

Storage
Encrypted off-chain evidence + on-chain fingerprints / references

05 — Tamper-Proof Verification Demo

Interactive demo showing complaint fingerprinting and simulated tampering detection.

Try the tamper demo

Complaint DNA means the record is fingerprinted at submission. Edit a complaint's description below without updating its fingerprint, then verify it from the Citizen tab to see the mismatch.
